

Non-Native Invasive Data Collection Form

Date	Surveyors (circle recorder)	Client	Project	Site	iPad/GPS/Camera ID
6/7/17	R. Brown, I. Maldonado	DWR	DEVIL CANYON	Silverwood Lake	3

Site Notes
 In and around SW area of lake → recreation areas

Location ID	Species Code	DIW*	CID**	Feature Type	Percent Cover (Absolute)	Percent Phenology			Total Photos	Approx. Area (sq.ft.)	Acre Class	NNIP Information (overall site description, population quality/viability, immediate & surrounding land use, visible disturbance, threats, resource concerns, comments)
						Vegetative	Flower	Fruiting				
1-1	CIRVUL	D	D	1	0-1%		75-100%		1	< 100	1	Disturbed margin adj. to bike path; NNIP also present in understory w/ native overstory Among rip-rap along lake shore at edge of recreation area → NNIP understory; Brassica sp.; some mulefat nearby.
2-1	CENMEL	D	C	2	5-10		75-100%	2	< 100	1		

Quantitative Data Collection: (A) Percent Coverages- Absolute Total & Phenological: 0-1%; 1-5%; 5-10%; 10-15%; 15-25%; 25-35%; 35-50%; 50-75%; 75-100%. (B) If a plant population is estimated to cover > 0.1 acre or if > 100 feet (linear) - map to the boundary. (C) If a plant population is < 0.1 acre or if < 100 feet (linear) then a map single central point and an estimate of acre class will be recorded. (D) Acre Classes: 1- up to 0.1 acre; 2- 0.1 to 0.25 acre; 3- 0.25 to 1.0 acre; 4- > 1.0 acre.

Qualitative Data Collection: (A) *D - discrete, or W - widespread. For widespread occurrences of NNIP, or for those which detailed mapping is unlikely to remain accurate (e.g., annual grasses, which change distributions yearly), describe general distribution and extent within the study area and estimate acre class. (B) **C - concentrated, or D - diffuse. (C) Feature Type: 1- Road/Road-Shoulder; 2- Park Area; 3- Mountain; 4- Hill; 5- Stream Channel; 6- Lake; 7- Other Water Body; 8- Barren; 9- Other. (D) If a population is identified on the perimeter of the FERC Project Boundary the extent of the population extending beyond the boundary will be estimated.
