Quantitative Data Collection: (A) Percent Coverages- Absolute Total & Phenological: 0-1%; 1-5%; 5-10%; 10-15%; 15-25%; 25-35%; 35-50%; 50-75%; 75-100%. (B) If a plant population is estimated to cover > 0.1 acre or if > 100 feet (linear) - map to the boundary. (C) If a plant population is < 0.1 acre or if < 100 feet (linear) then a map single central point and an estimate of acre class will be recorded. (C) Acre Classes: 1- up to 0.1 acre; 2- 0.1 to 0.25 acre; 3- 0.25 to 1.0 acres; 4- > 1.0 acres.

Qualitative Data Collection: (A) * D - discrete, or W - widespread. For widespread occurrences of NNIP, or for those which detailed mapping is unlikely to remain accurate (e.g., annual grasses, which change distributions yearly), describe general distribution and extent within the study area and estimate acre class. (B) ** C - concentrated, or D - diffuse. (C) Feature Type: 1- Road/Road-Shoulder; 2- Park Area; 3- Mountain; 4- Hill; 5- Stream Channel; 6- Lake; 7- Water Body; 8- Barren; 9- Other. (D) If a population is identified on the perimeter of the FERC Project Boundary the extent of the population extending beyond the boundary will be estimated.
