Non-Native Invasive Data Collection Form

NNIP 4

Date	Surveyors (circle recorder)	Client	Project	Site	iPad/GPS/Camera ID
04/3/17	(S. Austin), A. Newton	DWR	Devil Canyon	Salvenwood Lake	iPad

Site Notes
Shoreline across lake from Serrano Landing

Species Code	DIW	CID	Feature Type	Percent Cover (Absolute)	Percent Phenology			Total Photos	Approx. Area (sq.ft.)	Acre Class	NNIP Information (overall site description, population quality/viability, immediate & surrounding land use), visible disturbance, threats, resource concerns, comments)
					Vegetative	Flower	Fruiting				
TAM RAM	D	D	Poly	20	100	0	0	1	64 sf	1	12' tall
BRO TEC	W	C	↓	45	0	60	40	2	65 sf	1	Tot. area = 146 sf
BEA NIG	D	D			0	85	15	1			
											Other spp.: Sal. good, Pla. rec. Sal. exi., Sal. Lav. Art. doug., P. Fraxinus? P. Rumex - crispus? Cyperus - no flowers

Quantitative Data Collection: (A) If a plant population is estimated to cover > 0.1 acre or if >100 feet (linear) - map to the boundary. (B) If a plant population is <0.1 acre or if <100 feet (linear) then a map single central point and an estimate of acre class will be recorded. (C) Acre Classes: 1- up to 0.1 acre; 2- 0.1 to 0.25 acre; 3- 0.26 to 4.0 acres; 4- > 4.0 acres

Qualitative Data Collection: (A) For widespread occurrences of NNIP, or for those which detailed mapping is unlikely to remain accurate (e.g., annual grasses, which change distributions yearly), describe general distribution and extent within the study area and estimate acre class. (B) If a population is identified on the perimeter of the FERC Project Boundary the extent of the population extending beyond the boundary will be estimated.

* D - discrete, or W - widespread ** C - concentrated, or D - diffuse
