Site Notes

Buckwheat scrub   060717 NNIP6

Species Code	DIW ·	CID ··	Feature Type	Percent Cover (Absolute)	Percent Phenology			Total Photos	Approx. Area (sq.ft.)	Acre Class	NNIP Information (overall site description, population quality/viability, immediate & surrounding land use), visable disturbance, threats, resource concerns, comments)
					Vegetative	Flower	Fruiting				
BROMAD	W	C	South-	25			100	1			060717 NNIP6
SCOBAR			facing								
SCHARA	W	D	slope	5			100				Site Desc: South-facing slope w/
HERBARCE											buckwheat dominant. Rocky soils.
AMSMEN	C	D		2			100				Vis. Dist: —
CENMEL	C	D		5			100				Threats: —
BRANIG	C	D		1		50	50				Res Conc: —

Quantitative Data Collection: **(A)** If a plant population is estimated to cover > 0.1 acre or if >100 feet (linear) - map to the boundary. **(B)** If a plant population is <0.1 acre or if <100 feet (linear) then a map single central point and an estimate of acre class will be recorded. **(C)** Acre Classes: **1**- up to 0.1 acre; **2**- 0.1 to 0.25 acre ; **3**- 0.26 to 4.0 acres; **4**- > 4.0 acres

Qualitative Data Collection: **(A)** For widespread occurrences of NNIP, or for those which detailed mapping is unlikely to remain accurate (e.g.,annual grasses, which change distributions yearly), describe general distribution and extent within the study area and estimate acre class. **(B)** If a population is identified on the perimeter of the FERC Project Boundary the extent of the population extending beyond the boundary will be estimated.

* D -discrete, or W- widespread   ** C- concentrated, or D- diffuse
